

Introduction

LangChain is a framework for developing applications powered by large language models (LLMs).

LangChain simplifies every stage of the LLM application lifecycle:

- **Development:** Build your applications using LangChain's open-source [components](#) and [third-party integrations](#). Use [LangGraph](#) to build stateful agents with first-class streaming and human-in-the-loop support.
- **Productionization:** Use [LangSmith](#) to inspect, monitor and evaluate your applications, so that you can continuously optimize and deploy with confidence.
- **Deployment:** Turn your LangGraph applications into production-ready APIs and Assistants with [LangGraph Platform](#).

LangChain implements a standard interface for large language models and related technologies, such as embedding models and vector stores, and integrates with hundreds of providers. See the [integrations](#) page for more.

Select **chat model**:

OpenAI ▾

```
pip install -qU "langchain[openai]"
```

```
model.invoke("Hello, world!")
```

i NOTE

These docs focus on the Python LangChain library. [Head here](#) for docs on the JavaScript LangChain library.

```

1 import getpass
import os

2 if not os.environ.get("OPENAI_API_KEY"):
3     os.environ["OPENAI_API_KEY"] = getpass.getpass("Enter API key for
4     OpenAI: ")

from langchain.chat_models import init_chat_model

model = init_chat_model("gpt-4o-mini", model_provider="openai")

```

Important integrations have been split into lightweight packages that are co-maintained by the LangChain team and the integration developers.

- **langchain**: Chains, agents, and retrieval strategies that make up an application's cognitive architecture.
- **langchain-community**: Third-party integrations that are community maintained.
- **langgraph**: Orchestration framework for combining LangChain components into production-ready applications with persistence, streaming, and other key features. See [LangGraph documentation](#).

Guides

Tutorials

If you're looking to build something specific or are more of a hands-on learner, check out our [tutorials section](#). This is the best place to get started.

These are the best ones to get started with:

- [Build a Simple LLM Application](#)
- [Build a Chatbot](#)
- [Build an Agent](#)
- [Introduction to LangGraph](#)

Explore the full list of LangChain tutorials [here](#), and check out other [LangGraph tutorials here](#). To learn more about LangGraph, check out our first LangChain Academy course, *Introduction to LangGraph*, available [here](#).

How-to guides

[Here](#) you'll find short answers to "How do I...?" types of questions. These how-to guides don't cover topics in depth – you'll find that material in the [Tutorials](#) and the [API Reference](#). However, these guides will help you quickly accomplish common tasks using [chat models](#), [vector stores](#), and other common LangChain components.

Check out [LangGraph-specific how-tos here](#).

Conceptual guide

Introductions to all the key parts of LangChain you'll need to know! [Here](#) you'll find high level explanations of all LangChain concepts.

For a deeper dive into LangGraph concepts, check out [this page](#).

Integrations

LangChain is part of a rich ecosystem of tools that integrate with our framework and build on top of it. If you're looking to get up and running quickly with [chat models](#), [vector stores](#), or other LangChain components from a specific provider, check out our growing list of [integrations](#).

API reference

Head to the reference section for full documentation of all classes and methods in the LangChain Python packages.

Ecosystem

Trace and evaluate your language model applications and intelligent agents to help you move from prototype to production.

Build stateful, multi-actor applications with LLMs. Integrates smoothly with LangChain, but can be used without it. LangGraph powers production-grade agents, trusted by LinkedIn, Uber, Klarna, GitLab, and many more.

Additional resources

Versions

See what changed in v0.3, learn how to migrate legacy code, read up on our versioning policies, and more.

Security

Read up on [security](#) best practices to make sure you're developing safely with LangChain.

Contributing

Check out the developer's guide for guidelines on contributing and help getting your dev environment set up.

elcolie [29 days ago](#)

The model selection in this page should add `deepseek`.

TomiToivio [13 days ago](#)

Gotta try this. If I only had suitable data in current project.

shubhambudde1 [3 days ago](#)

Why you don't give proper docs

jacobchan [2 days ago](#)

I think the paper should be better for dev readers
